# Class 7 Computer Science Easy Notes — Quality & Coverage Report

Covers: Computer Science Class 7 — Units 2–6 Notes.pdf (70 pages, landscape A4)
Source textbook: Computer 7 SNC 2023–24 (Punjab Curriculum), Units 2–6
Report date: 2026-10-21

## 1. What this report covers

This is the newest in a long chain of revision rounds on the same notes document. Earlier rounds (not repeated here) already did the heavy lifting: every unit's content was checked page-by-page against the official textbook's scanned pages, diagrams were redrawn as real figures, the correct-answer tick was placed above the MCQ option letter, the layout was made landscape and single-column for the topic body, every Short Question and MCQ was tagged with its Topic number, and the prose went through three separate simplification/tightening passes to reach short, plain, exam-ready English.

This round was a fresh **audit pass against an explicit answer-length policy**, plus one addition (a Quick Revision box per unit). It did **not** re-scan the textbook page images — coverage against the book was already verified in earlier rounds and is restated below unit by unit from those counts, which this pass did not reduce.

## 2. Process followed

1. Five reviewers (one per unit) read their unit's file in full, top to bottom.
2. Each checked four rules: definitions should be one sentence, Short Question answers 1–3 sentences, Long Question answers a one-sentence lead-in plus a numbered breakdown, and any two-thing comparison with 2+ real points of contrast should be a table.
3. Each added a "Quick Revision" section: one memory-jogger bullet per topic, placed at the end of the unit's topic body, before its Short Questions.
4. Each did a technical spot-check of the facts, numbers and worked examples in their unit.
5. I rebuilt the PDF, checked the page count stayed at or under the 70-page ceiling, and visually inspected rendered pages (including every new Quick Revision section and every newly added comparison table) for layout problems.
6. I found and fixed one rendering bug (below) before the final build.

## 3. Per-unit findings

### Unit 2 — Digital Skills

- 7 topics · 26 Short Questions · 10 Long Questions · 15 official + extra-practice MCQs (capped at 19 in the PDF)
- Fixes: 1 Short Question shortened to bullets, 2 Long Questions trimmed from 9 steps to 6, 0 definition fixes needed.
- 3 new comparison tables added: Numbered vs Bulleted List, Browsed by an Individual vs at a Kiosk, POP3 vs IMAP.
- Quick Revision: 9 bullets added, one per topic plus two sub-topic bullets.
- No factual errors found beyond those already logged in "Mistakes Found in the Book".

- **One rendering bug found and fixed:** the Short Question fix for Q4 (PowerPoint benefits) was written as a dash-bulleted list, but this document's Short-Question layout renders each answer as a single flowing line, so the dashes would have shown as stray hyphens mid-sentence. Rewritten as one flowing sentence before the final build — same facts, no content lost.

### Unit 3 — Computational Thinking

- 4 topics · 25 Short Questions · 8 Long Questions · 10 official + extra-practice MCQs (capped at 14)
- Fixes: 3 definitions tightened to one sentence (Pattern Recognition, Algorithm Design, Flowchart), 0 Short/Long Question fixes needed (all already compliant).
- 2 new comparison tables added: Finite Loop vs Infinite Loop, and a Solution 1 vs Solution 2 efficiency comparison.
- Quick Revision: 15 bullets covering all 4 topics and their key sub-ideas (cornerstones, algorithm characteristics/types, flowchart symbols, pre-requisites).
- Technical spot-check: both worked algorithms and both efficiency solutions re-verified step-by-step; all correct and consistent with the existing "Mistakes Found" entries.
- This unit also carries the exact passage the earlier ChatGPT-style comparison was based on (Pattern Recognition / Generalization and Abstraction) — unchanged in this pass, already at the target style.

### Unit 4 — Programming

- 7 topics · 26 Short Questions · 9 Long Questions · 10 official + extra-practice MCQs (capped at 14)
- Fixes: 3 definitions tightened (switches, image metadata, Set block), 3 Short Questions trimmed from 4 sentences to 3, 1 Long Question intro trimmed from two sentences to one.
- 2 new comparison tables added: Repeat Loop vs Forever Loop, Sample Rate vs Bit Rate.
- Quick Revision: 12 bullets covering all 7 topics plus conversion and sprite-movement sub-ideas.
- Technical spot-check: every binary↔decimal conversion, ASCII value and the RGB/hex and memory-unit tables were recomputed and confirmed correct.

### Unit 5 — Digital Citizenship

- 7 topics · 26 Short Questions · 8 Long Questions · 10 official + extra-practice MCQs (capped at 14)
- Fixes: 0 definition fixes and 0 Short Question fixes needed (all already compliant); 1 Long Question intro trimmed from two sentences to one.
- 1 new comparison table added: the three common scams (Phishing / Fake websites / Tech support scams) as a Scam vs How It Tricks You table.
- Quick Revision: 12 bullets, one per topic.
- No new factual issues found beyond the existing "Mistakes Found" entries.

### Unit 6 — Entrepreneurship in the Digital Age

- 7 topics · 27 Short Questions · 10 Long Questions · 10 official + extra-practice MCQs (capped at 14)
- Fixes: 1 Short Question (QA vs QC) trimmed from 4 sentences to 2; 0 definition fixes and 0 Long Question intro fixes needed (all already compliant).
- 1 new comparison table added: Quality Assurance vs Quality Control.
- Quick Revision: 13 bullets, one per topic plus SEO-pyramid and marketing-technique sub-bullets.
- No new factual issues found beyond the existing "Mistakes Found" entries.

## 4. Coverage confirmation

No Short Question, Long Question, MCQ, topic, diagram, fact, number, or book citation was deleted in this pass. Every change was one of: shortening an over-length answer while keeping every fact, reformatting an existing comparison into a table, or adding the new Quick Revision section. The per-unit counts above match the counts from the prior verification rounds — total coverage against the official textbook's Units 2–6 content is unchanged and intact.

MCQ bank sizes above show the full count each reviewer found in the file; the build script caps each unit's printed MCQ/Short-Question bank at the official book count plus 4 extra practice items, to keep the PDF inside its page budget — this cap was already in place before this round and was not changed.

## 5. Decisions made on two optional parts of the brief

- **Roman Urdu support line:** not added. The brief marks this as optional and says to skip it if the notes are meant to stay English-only. Earlier rounds deliberately kept these notes English-only because the student writes exam answers in English, and adding a Roman Urdu line under each difficult term across five units would add meaningful page count for a document already at its 70-page ceiling. Happy to add it to specific hard topics if wanted.
- **Separate "Important Definitions" bucket per unit:** not added as its own section. The brief explicitly allows keeping existing categories where they already work, and every term in this document is already defined in bold, in one sentence, right where it is first used in the topic body — a second, separate definitions list would just repeat that content and add pages without adding anything a student can revise from one list that's not already at hand.

## 6. Outstanding items

No `<!-- FLAG -->` comments were left by any reviewer — no fact in the notes looked wrong or unverifiable during this pass. The document's own "Mistakes Found in the Book" section (kept unchanged in every unit) continues to record the handful of real errors found in the official textbook itself during earlier verification rounds, separate from this document's own content.

## 7. Final check

- Page count after this round: **70 pages** (within the 60–70 page ceiling).
- All five units visually spot-checked after the final rebuild, including every new Quick Revision section and every newly added comparison table — no clipped text, no broken tables, no layout problems found.
